I. Summary

A. Context

There are rising tensions in the corridors of Gotham's town hall due to challenging working conditions, long shifts, and other issues. The main trade union (CGT-U) is alerting the authorities.

To ease the tensions, the town hall decides to implement a time management application that the developers need to create. This application would allow municipal employees to access days off for recuperation

The project is to develop a "TIME MANAGER" application which is a time tracking application intended to improve working conditions at the Gotham town hall. It identifies the users, describes the required features, and provides advice on dashboard design. The focus is on making the application adaptable to meet the specific needs of each user category and on accommodating visual impairments.

The document presents the different functions of the site and how to use the application.

II. Mobile

A. Login / Register page

When you arrive at the application, you'll find a login page where you can identify yourself using your email address and password. If you don't have an account, you can create one by clicking on the register button.
To create an account, the user must specify a username, an email address and a password.
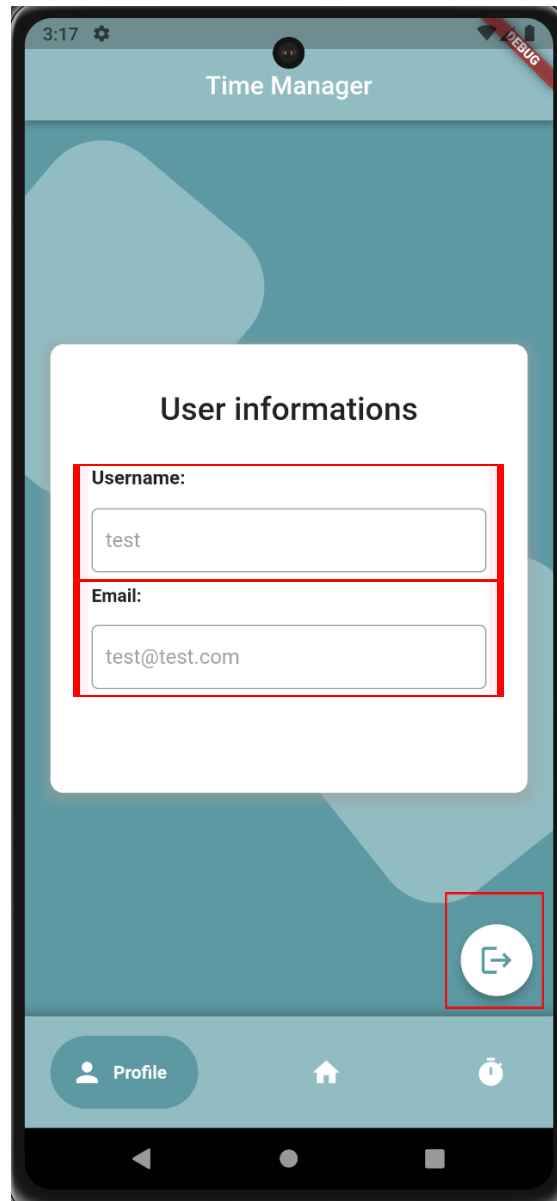

B. **Home page**
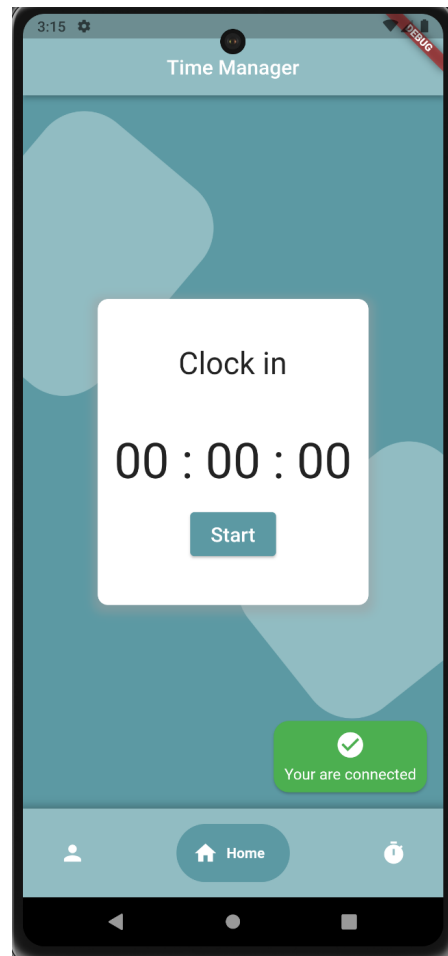

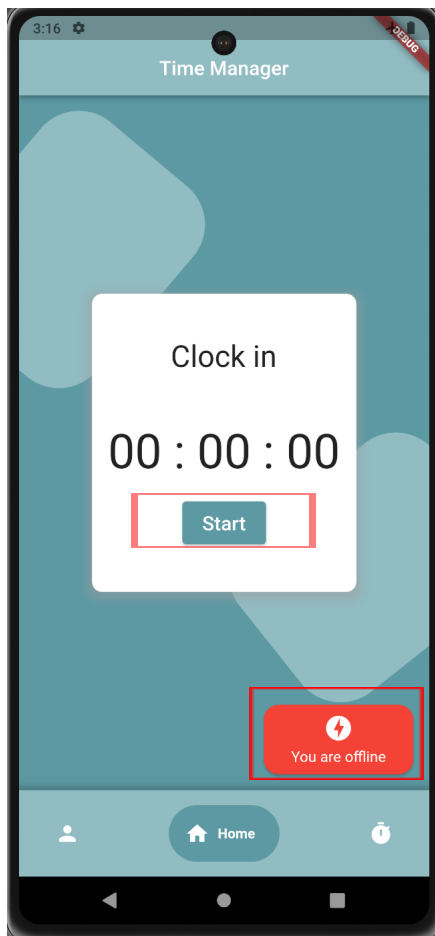

On the home page you will find information about whether or not the user is connected to the Internet.
The user has the option of recording their working time and then stopping it. If the user is connected to the internet, this time will be added to the time manager tab.

C. **Profile page**

On the profile page, users can view information such as their email address and username. They can also log out using the button at the bottom right of the page.

D. **Working Time page**

Finally, the time manager page allows users to view their recorded times, including their start and finish times. They can scroll down the page to see the times that are lower down.

If they have not yet recorded a working time, a text is displayed to notify them.
